--------------	----------

datamuse_api	<i>Call Datamuse API and return data.</i>
--------------	---

Description

Call Datamuse API and return data.

Usage

```
datamuse_api(path, limit = 10)
```

Arguments

path	path to append to Datamuse API endpoint.
limit	number of results to limit the API response to.

Value

data returned from API call.

Examples

```
datamuse_api("/words?rel_rhy=test")
datamuse_api("/words?ml=test")
```

get_content	<i>Extract content from Datamuse API call.</i>
-------------	--

Description

Extract content from Datamuse API call.

Usage

```
get_content(full_path, return_type = "df", limit = 10)
```

Arguments

full_path	API path to append to Datamuse API endpoint.
return_type	type to return. Options are: <ul style="list-style-type: none"> • 'df' for data.frame. • 'word' for a single word. • 'random_word' or 'random word' or 'rand' for a random word. • 'vector' for a vector of words.
limit	max number of rows to return from the content dataframe.

Value

content returned from API call.

Examples

```
get_content("/words?rel_rhy=test", limit = 5)
get_content("/words?ml=test", limit = 20)
```

get_means_like	<i>Get dataframe for words with similar meaning.</i>
----------------	--

Description

Get dataframe for words with similar meaning.

Usage

```
get_means_like(word = "test", return_type = "df", limit = 10)
```

Arguments

word	to get similar meaning with.
return_type	type to return. Options are: <ul style="list-style-type: none"> • 'df' for data.frame. • 'word' for a single word. • 'random_word' or 'random word' or 'rand' for a random word. • 'vector' for a vector of words.
limit	max number of words to return.

Value

data with words of similar meaning.

Examples

```
get_means_like("test")  
  
get_means_like("test", limit = 10)
```

get_other_related	<i>Get data for words that are related according to a supplied code.</i>
-------------------	--

Description

Get data for words that are related according to a supplied code.

Usage

```
get_other_related(word = "test", code = "jja", return_type = "df", limit = 10)
```

Arguments

word	to get similarly spelled words with.
code	related word code from http://www.datamuse.com/api/ .
return_type	type to return. Options are: <ul style="list-style-type: none">• 'df' for data.frame.• 'word' for a single word.• 'random_word' or 'random word' or 'rand' for a random word.• 'vector' for a vector of words.
limit	max number of words to return.

Value

data with words that are related.

Examples

```
get_other_related("test", code = "jja", limit = 3)  
  
get_other_related("test", code = "cns", limit = 10)
```

get_rhyme *Get data for rhyming words.*

Description

Get data for rhyming words.

Usage

```
get_rhyme(word, return_type = "df", limit = 10, num_syl = NULL)
```

Arguments

word	to rhyme with.
return_type	type to return. Options are: <ul style="list-style-type: none">• 'df' for data.frame.• 'word' for a single word.• 'random_word' or 'random word' or 'rand' for a random word.• 'vector' for a vector of words.
limit	max number of words to return.
num_syl	number of syllables in rhymes to return.

Value

data with rhyming words.

Examples

```
get_rhyme("test")  
get_rhyme("test", limit = 10)
```

get_sounds_like *Get data for words that sound similar.*

Description

Get data for words that sound similar.

Usage

```
get_sounds_like(word = "test", return_type = "df", limit = 10, num_syl = NULL)
```

Arguments

word	to get similar sounding words with.
return_type	type to return. Options are: <ul style="list-style-type: none"> • 'df' for data.frame. • 'word' for a single word. • 'random_word' or 'random word' or 'rand' for a random word. • 'vector' for a vector of words.
limit	max number of words to return.
num_syl	number of syllables in rhymes to return.

Value

data containing word(s) that sound similar.

Examples

```
get_sounds_like("test")
get_sounds_like("test", limit = 10)
```

get_spelled_like	<i>Get data for words that are spelled similarly.</i>
------------------	---

Description

Get data for words that are spelled similarly.

Usage

```
get_spelled_like(word = "test", return_type = "df", limit = 10)
```

Arguments

word	to get similarly spelled words with.
return_type	type to return. Options are: <ul style="list-style-type: none"> • 'df' for data.frame. • 'word' for a single word. • 'random_word' or 'random word' or 'rand' for a random word. • 'vector' for a vector of words.
limit	max number of words to return.

Value

data with words that are spelled similarly.

Examples

```
get_spelled_like("test")  
  
get_spelled_like("test", limit = 10)
```

return_content	<i>Helper function to shape data to return to user.</i>
----------------	---

Description

Helper function to shape data to return to user.

Usage

```
return_content(api_content, return_type)
```

Arguments

api_content	content returned from the API call.
return_type	type to return. Options are: <ul style="list-style-type: none">• 'df' for data.frame.• 'word' for a single word.• 'random_word' or 'random word' or 'rand' for a random word.• 'vector' for a vector of words.

Value

data as specified above.
